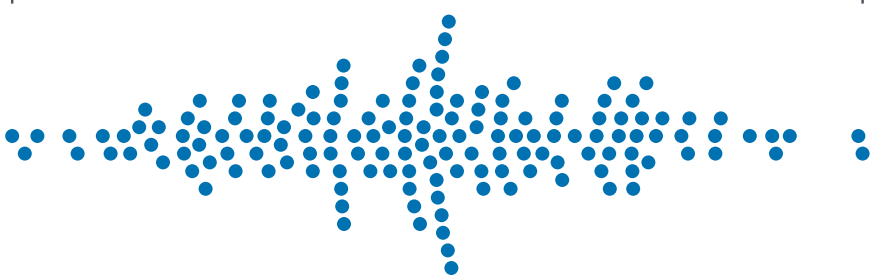
How well did published planet-transit predictions hold up?

ExoClock's November 2025 forecasts: 2,185 accepted TESS timings from 151 planets

Predictions issued November 2025 › **Main test locked** before data access › **Timings measured** from later TESS data › **Accepted times scored** for miss and range

150 of 151 planets
all accepted timings within 26.4 minutes



1 planet missed by hours
HR 858 b: about 6 hours early on all 16 accepted timings
Neighbour was hours late on a separate published timetable

Accepted: 2,185 of 3,103 predicted transits; 151 of 156 planets

Each dot: one planet's largest accepted miss (logarithmic scale)

≈1 minute

typical miss across 2,185 accepted timings

91%, not 95%

inside 95% timing ranges, averaged over planets

Open table

predictions + accepted timings to test better forecasts

Ranges include our timing uncertainty. Widening them gave no clear overall gain.
