How well did published planet-transit predictions hold up?

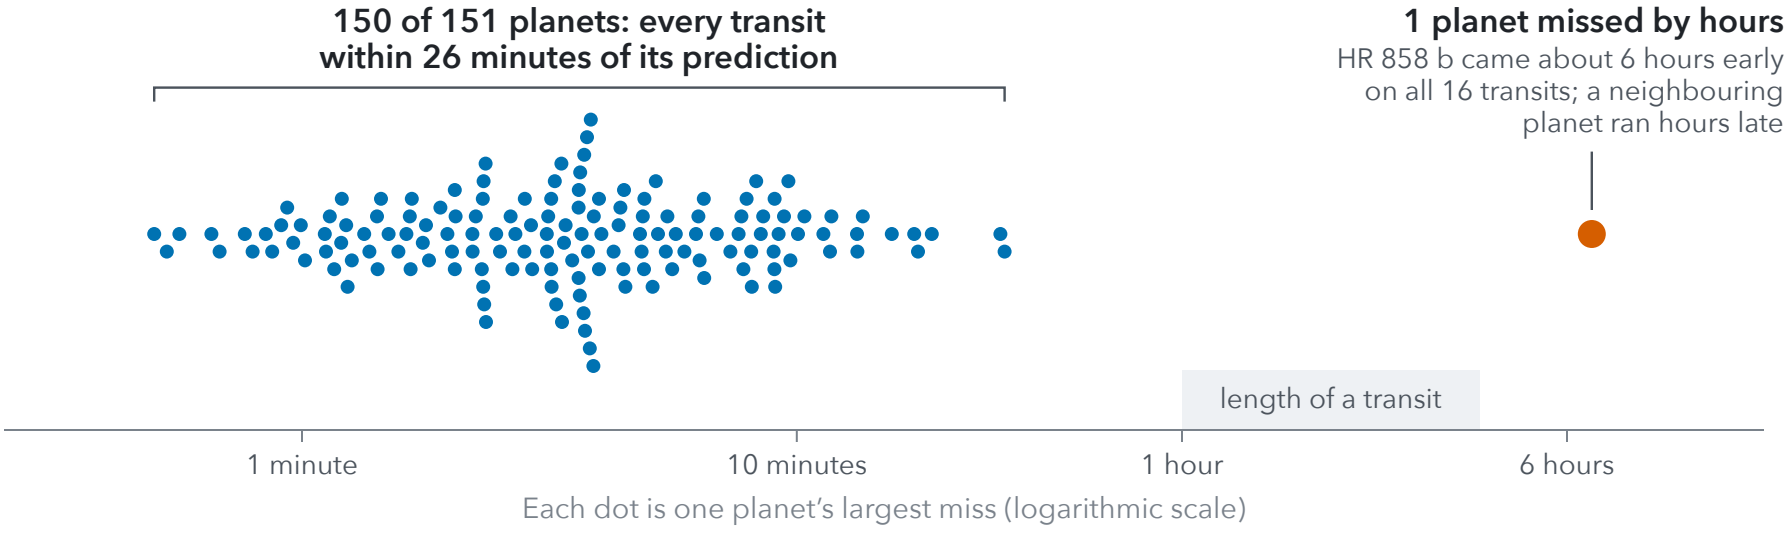

ExoClock's November 2025 catalogue, tested against 2,185 transits of 151 planets that NASA's TESS satellite saw later

Predictions issued
November 2025

Test rules locked
before any data opened

Transits measured
independently, 2026

Every prediction scored
against its stated range

≈1 minute

typical miss across all 2,185 transits

91%, not 95%

of each planet's transits fell inside ranges labelled 95%: a little narrow

Open table
